Langley Shoe Renew is a local shoe repair store in Langley, British Columbia. They specialize in tack repair, shoes repair, jacket, zipper repair, etc. The store has never had a web presence, until now.

The objective of the website is to attract more potential customers to the store by allowing them to access information about the store more easily from there computers/phones.

The site is built on one page, so I will not display a diagram. Instead I will explain the site with images.

The top is a fixed position, so it will always display when you scroll down the page. This makes it easier for the

viewer to find essential information like the address, phone number etc. If you click the address or phone number, it will copy it to the clipboard via JavaScript. The hours of operation are also the first things you see on the site.

We have been serving in Langley since 1984. We do all kinds of repairs: **equestrian equipment** (riding boots, tack, horse blanket), **sport equipment** (hockey equipment, baseball gear), **bags** (purses, hand bags, wallets, backpacks), **jackets** (motorcycle jackets), **all kinds of zippers** (heavy motorcycle jacket zippers), **carpenter pouch** and **many more**. We also do cut **keys** and sell **Canadian made leather belts**.

Description of what the store does. Bold text to make certain key words stand out. There is also a picture of the store, so people know what to look for.

At the end of the site, there are buttons to go to google reviews and google maps. There is also the address and phone number again.

The business is going to benefit from this web project because it will potentially help attract more customers = more money.

Besides the Langley Shoe Renew site, I built another site to host all the other requirements that I could not put onto the Langley Shoe Renew site which I linked in a big red button.
